Address all correspondence to: Mark Adams The Institute for Genomic Research 9712 Medical Center Dr. Rockville, MD 20850, USA e-mail address: humgen@tigr.org. The orientation of the sequence is from SP6 end to T7 end. Genes were identified by a compination of five methods including: XGRALL (vavilable by anonymous ftp from arthur.epm.ornl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gensic.stanford.Edu/-chris/GENSCANW.html)searches of the complete sequence against a peptide database, and the Human gene Index database at TIGR (http://www.tigr.org/tdb/hgi/hdi.html). Genes without peptide homolyg having spliced EST hits are termed 'Unknown gene product'. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).

tissues
Claim 1; Page 1501; 2245pp; Japanese.
A single-stranded DNA (or its complementary strand or the corresp.
double-stranded DNA) which comprises one of the 7837 "GS" sequences
given in T19001-T26837 and which is able to hybridise to part of
human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature)
sequences were obtained from 3'-directed cDNA libraries prepared
from various human tissues; synthesis of cDNA was initiated from the
3'-end of mRNA by using poly(T) as the sole primer. Since the 3'untranslated sequence is unique to a particular mRNA species, almost
all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library
is constructed so as to reflect accurately the relative abundance of
different mRNAs in the particular tissue from which it was derived. try) UMGS05943. ger RNA: mRNA; relative abundance; frequency; g; non-biased library; diagnosis; detection; cell function; ss. tures in 3'-directed human cDNA library - e.g. mal cell function, by preparing cDNA that dance of corresp. mRNA in specific human ВЪ. mRNA; 316 9 # # 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 8: Page 36: 135pp; English.

728076-728113, and T28131-728173 represent novel senescent-related gene capeners isolated from fibroblasts using the method of the invention.

728076-728113, and T28131-728173 represent novel senescent-related gene sequences isolated from fibroblasts using the method of the invention.

720 and a young quiescent cell, and the mRNAs are amplified (using primers as those shown in T28044-T28075) in separate reaction mixtures. The mplified sequences are then separated by size or charge, and the products are analysed to identify a gene from young quiescent cells and dividing cells, that is present at a different level from senescent cells.

721 To enhance the method even more, it can be performed in conjuncture with an enhanced differential display (EDD) method (an mRNA preparation method) on the fibroblasts. The method can be used for the rapid and efficient identification and isolation of senescence-related genes and gene products, and to detect and distinguish between senescent and non-senescent cells. It can also be used to destroy cells expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Probe 03F1 isolated from fibroblasts.

The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

Sequence 316 BP; 107 A; 35 C; 62 G; 105 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Introducing random point mutations into nucleic acods -
Throducing random point mutations into nucleic acods -
Throducing random stranded template, annealing a primer, elongation,
misincorporation, completion of molecules and screening.

Disclosure; p; English.

E andom point mutations were introduced into the alpha fragment of
E coil beta-galactosidase. The wild type sequence was obtained as a
single stranded template and an oligonucleotide was hybridised to
it to generate a popn of DNA molecules which terminate at all
possible nucleotide positions within a specified region. The
variable 3' ends generated in this way are used as primers for
reverse transcriptase. Nucleotides are misincorporated by the
transcriptase and the molecules are completed to forms that can be
amplified and then expressed in a suitable host-vector system.

The sequence covers all 176 difft base substitutions, most of which
senescence specific (or related) gene products, and to screen for compounds capable of altering gene expression in senescent cells. The method can also be used to ameliorate problems associated with the accumulation of senescent cells such as age-related lipofuscin accumulation in the retina, and in the treatment of AIDS. Also, the method can be used to distinguish young cells from senescent cells in donor tissue, which is useful in removing senescent melanocytes overexpressing melanin which cause hypopigmentation, or liver spots.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     127 CAAGATCAAACCAAACGACAGCTACAGATGTCCAGACGCCCAGCAATGCAATCA 74
                                                             Oligonoclectide probe MK14-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. Throducing random point mutations into nucleic acods -  

Throducing random point mutations into nucleic acods -  

Throducing random point mutations into nucleic acods -  

Throducing random point mutations was into nucleic acods -  

Throducing random point mutations were introduced into the alpha fragment of  

Throducing point mutations were introduced into the alpha fragment of  

Throducing point mutations were introduced into the alpha fragment of  

Throducing point mutations were introduced into the alpha fragment of  

Throducing point mutations which is sequence was obtained as  

Single stranded template and an oligonucleotide was hybridised to  

It of generate a popn of DNA molecules which terminate at all  

Throughout the propositions within a specified region. The  

Variable 3' ends generated in this way are used as primers for  

Through transcriptase. Nucleotides are misincorporated by the  

Through transcriptase and the molecules are completed to forms that can be  

Through transcriptase and the molecules are completed to forms that can be  

Through transcriptase and the molecules are completed to forms that can be  

Through transcriptase and the molecules are completed to forms that can be  

Through transcriptase and the molecules are substitutions, most of which  

Through transcriptase and the sequence of the sequence of the sequence of the sequence of the sequence and the molecules are completed to forms that can be  

Through transcriptase and the sequence all 176 diffet base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Synthetic Affinity Reagents) peptides. This generate formula can also be

CC (70467) is a generic DNA Sequence Sequences are shown in Reagentic peptides generate sequences are shown in Q70466-68.

CC offer specific peptides generated by these generic sequences are shown in R65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a finity for a ligand and a second effector peptide portion that is comprise an allohouse peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned contains in, or flanking, the unpredicted or variant residues. These residues positioned in or in, or flanking the unpredicted or variant residues. These residues positioned contains a processed peptide contains a processed peptide or variant residues. These residues positioned contains are also designed and a second effector peptide perventance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      confer some degree of conformational rigidity to the peptides. The TSARs or compsns. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eq. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eq. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 349 GAATTIGITCITTIGCITCATCITCGATATICTGGGGTTCTGCCTCCACAGGAACCTGCT 290
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Generic DNA sequence to generate a random TSAR petide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bunbunbunbunbunbunbunbunbunbunbunbunbtgcunbunnunnunbunbun 68

Comprising a binding domain and an effector domain

Disclosure, Page 35, 255pp; English.

Co 70465 is a generic DNA sequence used to generate random TSAR (Totally

Synthetic Affinity Reagents) peptides. This generic formula can also be

co synthetic Affinity Reagents) peptides. This generic formula can also be

co and Y are flanking restriction sites (X is not the same as Y) that are

not specified further. Other generic sequences are shown in Q70466-68.

CC Other specific peptides generated by these generic sequences are shown in

R65151-54. TSARS are concatenated heterofunctional proteins or peptides

CC Omprising at least two functional regions - a binding domain with

affinity for a ligand and a second effector peptide portion that is

CC chemically or biologically active. They may further comprise a linker

C chemically or biologically active. They may further comprise a linker

CC that the expressed peptide contains 2 or 4 cysteine residues positioned

in or flanking, the unpredicted or variant residues. These residues

CC offer some degree of Conformational rigidity to the peptides. The TSARS

CC confer some degree of Conformational rigidity to the peptides. The TSARS

CC confer some degree of conformational rigidity to the specific target or on the

CC deliver a chemically or biologically active moiety, eg. metal ion,

CC addiver an also replace the function of macromolecules, eg.

CC andiotion. The TSARS are easily characterised and have designed

CA activity allowing direct and rapid detection in a screening process.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a human or mammalian DNA replication origin oncensenus as sequences of the invention, designated uniorsconsenus.

Administration of the consensus sequence or an anti-gene (comprising a double stranded copy of the consensus) is used to inhibit DNA replication in vivo or in vitro. The consensus sequences can also be inserted into an expression vector, used subsequently for in vitro transfection of mammalian cells, to control initiation of DNA replication. They can also be used used to maintain circular plasmids that are capable of semi-conservative replication in proliferating mammalian cells, or inserted into mammalian or human artificial chromosome vectors for gene therapy. Particularly, they are used to create shuttle vector constructs for defining the essential mammalian elements required for maintenance of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô

CO 70468 is a generic DNA sequence used to generate random TSAR (Totally

Synthetic Affinity Reagents) peptides. This generic formula can also be

CC and Y are flanking restriction sites (X is not the same as Y) that are

CC offer specific peptides generated by these generic sequences are shown in C70466-68.

CC other specific peptides generated by these generic sequences are shown in C7046-68.

CC other specific peptides generated by these generic sequences are shown in C7046-68.

CC offer specific peptides generated by these generic sequences are shown in C7046-68.

CC offer specific peptides generated by these generic sequences are shown in C7046-68.

CC offer specific peptides generated by these generic sequences are shown in C7046-68.

CC offer specific peptides generated by these generic sequences are shown in C7046-68.

CC offer specific peptides of second effector peptide portion that is chemically or biologically active. They may further comprise a linker confer some degree of conformational can be used in vivo to confer some degree of conformational conformation and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody crollogically characterised and have designed activity production. The TSARs are easily characterised and have designed activity sequence 114 BP; 0 A; 2 C; 2 G; 2 T;
                                                 linear, large or small yeast artificial chromosomes (YACs) or as episomal
ohromosomal function. The consensus sequence can be combined with cloned human telomeres and large centromeric blocks for assembly of human artificial chromosomes and maintained as bacterial plasmids, circular or

Tomprising a binding domain and an effector domain a ligand - by comprising a binding domain and an effector domain a ligand - by bisclosure; Page 35; 255pp; English.

Disclosure; Page 35; 255pp; English.

CONTOTED By agent of the same as follows: X(TGC)(NNB)10-

This generic formula can be represented as follows: X(TGC)(NNB)10-

(TGC)(NNB)6Z(NNB)2(TGC)(NNB)14(TGC)Y. X and Y are flanking restriction sites (X is not the same as Y) that are cloverleaf in structure. Other specifies peptides that are cloverleaf in structure. Other specifies peptides that are cloverleaf in structure. Other specific peptides sequences are shown in Q70465-68. Other specific peptides on generated by these generic sequences are shown in Q70465-68. Other specific peptides on concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues? These residues confer some degree of conformational rigidity to the peptides. The TSARs or compsns. Comprising a Task binding domain can be used in vivo to deliver a chemically or biologically active molety, es mental ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, es, monoclonal or publyclonal antibodies the function of macromolecules, es monoclonal or bybylond and benefic contains or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid
                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tepresance as tellanking restriction sites (X is not the same as Y)
that are not specified further. Other generic sequences are shown in
CO 470466-48. Other specified further. Other generic sequences are shown in
CO 470466-48. Other specified peptides generated by these generic sequences
are shown in R65151-54. Takks are concatenated heterofunctional proteins
or peptides, comprising at least two functional regions - a binding
confinity for a ligand and a second effector peptide portion
that is chemically or biologically active. They may further comprise a
linker peptide between the 2 domains. The oligonucleotides are also
cathorized so that the expressed peptide contains 2 or 4 cysteine residues
confersome degree of conformational rigidity to the peptides.
The T5ARs or compans. comprising a T5AR binding domain can be used in
vivo to deliver a chemically or biologically active moiety, eg. metal
conformation and so replace the function of macromolecules, eg.
con, the call. They can also replace the function of macromolecules, eg.
concloral or polycional antibodies and therefore circumvent the need for
complex methods of hybridoma formation or in vivo antibody production.
CO Alter T5ARs are easily characterised and have dessigned activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                070466 is a generic DNA Sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows:X(NNB)1(TGC)(NNB)10(TGC)2(NNB)4Z(NNB)8(TGC)(NNB)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Generic DNA sequence to generate a random TSAR-9 petide library. TSAR: totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3 btgcnnbnnbnnbnnbnnbnnbnnbnnbnnbnnbtgctgcnnbnnbnnbnnbnnnnnn 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain Disclosure; Page 35; 255pp; English.

This sequence represents a human or mammalian DNA replication origin
Consensus sequences of the invention, designated uniorsconsensus.
Consensus sequences of the invention, designated uniorsconsensus.
Consensus sequences of the consensus sequence or an antigene (comprising a double stranded copy of the consensus) is used to inhibit DNA replication in vitro. The consensus sequences can also be inserted into an expression vector, used subsequently for in vitro transfection of mammalian cells, to control initiation of DNA replication. They can also be used used to maintain circular plasmids that are capable of conservative replication in proliferating mammalian cells, or inserted into mammalian or human artificial chromosome vectors for gene therapy. Particularly, they are used to create shutthe vector constructs for defining the essential mammalian elements required for maintenance of chromosomal function. The consensus sequence can be combined with cloned human telomeres and large centromestic blocks for assembly of human artificial chromosomes and maintained as bacterial plasmids, circular or illnear, large or small yeast artificial chromosomes (YACs) or as episomal

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins or encening a binding domain and an effector domain bisclosure; Page 35; 255pp; English.

O70467 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides This generic formula can also be represented as follows: X(NNB)16(TGC)(NNB)12(TGC)(NNB)12(TGC) (NNB)12(TGC) (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compsns. comprising a TSAR binding domain can be used in vivo to radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are essily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Sequence 22, Application US/08447570
Patent No. 5714589
GENERAL INFORMATION:
APPLICANT: OPPERMANN, HERMANN
APPLICANT: OZKAYNAK, ENGIN
APPLICANT: RUBERASAMPATH, THANGAVEL
APPLICANT: RUBERASAMPATH, THANGAVEL
APPLICANT: RUBERASAMPATH, THANGAVEL
APPLICANT: PANG, ROY H.L.
TITLE OF INVENTION: OSTEOGENIC DEVICES
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ATTORNEY/AGENT INFORMATION:
NAME: PITCHER, EDMUND R.
REGISTRATION NUMBER: 27,829
REFERENCE/DOCKET NUMBER: CRP-001CP6
TELECOMMUNICATION INFORMATION:
TELEFAX: 617/248-700
TELEFAX: 617/248-710
INFORMATION FOR SEQ ID NO: 22:
SEQUENCE CHARACTERISTICS:
LENGTH: 779 base pairs
TYPE: nucleic acid
STRANDEDNESS: single

double-stranded CDNA was size selected, ligated to Eco ladapters (Pharmacia), digested with Not I and cloned in the Not I and Eco RI sites of a modified pT713 vector (Pharmacia). Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from normal foreskin melanocytes (FS374) was kindly provided by Dr. Anthony P. Albino."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This clone is available royalty-free through LLNL ; contact the IMAGE Consortium (info@image.llnl.gov) for further information.

Double- stranded cDNA was digested with RsaI, resulting in blunt ended cDNA of an average 0.1-2 kb in length. Digested cDNA was split into two sets, one used as is as the driver, the other set was split in half again and each half linked to a different adaptor.

```
double-stranded cDNA was size selected, ligated to ECO KI adapters (Pharmacia), digested with Not I and cloned into the Not I and ECO RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatina Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő
